

Benton Foothills Watershed

VEGETATION

NOTE: Vegetation typing was based on multiple source data including 1993 SPOT and Landsat imagery, BLM vegetation mapping and University of Oregon Vegetation mapping. Recent harvesting was updated with 1995 aerial photography. All of the conifer areas are dominated by an overstory of conifer vegetation but may have other vegetation types in their understory.

No warranty is made by the Bureau of Land Management as to the accuracy, reliability or completeness of these data for individual use or aggregate use with other data.

Map 5

LEGEND

- | | |
|---------------------------------------|---------------------------------------|
| Open - urban | Conifer - mid seral (age 50-70) |
| Open - recent harvest area, slash | Conifer - late seral I (age 80-120) |
